

## **The Swedish Institute for Health Economics (IHE) is expanding our team for registry-based research/RWE**

We are looking for you who has a strong interest in health care and who is interested in working with health economic analysis of data from the health care system. We expect you will have a master's degree with significant exposure to quantitative analysis (e.g., econometrics or statistics). You should enjoy working in teams and you can express yourself well, both orally and in writing. We value integrity, analytical ability, independence, thoroughness, and a strong drive to get things done.

We work predominantly in Stata or R, and experience with at least one of these is a requirement. If you enjoy data visualisation, that is a plus.

We welcome both junior and experienced applicants. The position is located in our Lund office, but placement in our Stockholm office is a possibility for a more experienced candidate.

### **The Role**

You will be a member of one of IHE teams of experienced health economists conducting studies commissioned by public, private or civic stakeholders in Sweden and abroad. The work combines analytical components e.g., statistical analysis of complex health care data, with pedagogic presentation of results in reports and scientific papers.

In case of question, reach out to Peter Lindgren ([peter.lindgren@ihe.se](mailto:peter.lindgren@ihe.se)).

Your application—consisting of a letter and your CV and suitable reference— should be submitted to [rekrytering@ihe.se](mailto:rekrytering@ihe.se)

***We welcome your application!***

IHE was founded in Lund in 1979 as the first health economic research institute in Sweden. We conduct research and consultancy work for clients in Sweden and internationally.

As an independent research institute grounded in health economics, we work with clients from the public, private and civic sectors to provide evidence for sound decision-making.
